

ASISA AI USE DECLARATION

ASISA may utilise artificial intelligence ("AI") tools and technologies to support certain business, administrative, research, communication and operational activities. AI tools may be used to assist with content generation, information analysis, summarisation, drafting, transcription, data processing and other efficiency-enhancing functions.

AI is used as an assistive technology and does not replace human judgement, decision-making or accountability. AI-generated outputs are subject to appropriate human review and oversight before being relied upon or used for official purposes.

The use of AI by ASISA does not diminish our responsibility to ensure the accuracy, integrity, confidentiality and lawful processing of information. Appropriate measures are implemented to safeguard information and to promote compliance with applicable laws, including the Protection of Personal Information Act.
